Project Code: MITU0051
Project Name: SPAE – State Study
Prepared for: Charles Stewart
Interviews: 10200
Field Period: November 06, 2024 – November 27, 2024
Project Manager: Sara Sermarini – sara.sermarini@yougov.com

=====

YouGov interviewed 11,794 respondents who were then matched down to 200 respondents per state plus the District of Columbia to produce sample of 10,200 in the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frames were constructed by using different subsets of a politically representative "modeled frame" of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases for each state were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were for each state then post-stratified on 2020 Presidential vote choice and multiple variations of stratification of gender, age (4-categories), race (2 or 4 categories), and education (4-categories), to produce the 51 state weights.

The weighted 51 states were stacked and State RV weights were produced.

In addition, the stacked dataset was then post-stratified on state of residence, 2020 Presidential vote choice, and stratification of gender, age (4-categories), race (4 categories), and education (4-categories) to produce a Nationally Representative RV weight.
